

Risk Minimisation Update for COVID-19

COVID-19 is a respiratory illness caused by a new virus. Symptoms include fever, coughing, a sore throat and shortness of breath. The virus can spread from person to person, and we want to keep your children safe from this illness.

At this stage the risk to children and babies, and the role children play in the transmission of COVID-19, is not clear. However, there has so far been a low rate of confirmed COVID-19 cases among children, relative to the broader population.

Your child has an existing Risk Minimisation Plan. Are there any updates or additional risks that you would like WEMOOSH to be aware of in order to have current knowledge on how to treat your child's pre-existing conditions?

Child's name:
